**DETAILED ACTION*****Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 9-28 are rejected on the ground of nonstatutory double patenting over claims 1-15 of U. S. Patent No. 6,750,801 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: USP 6,750,801 ('801) claims in claim 1, a processor, a motion detector in communication with the processor, a directional mode indicator in communication with the processor, the directional mode indicator indicates one of multiple modes of operation of the remote control device based on a signal

Art Unit: 2612

generated by the motion detector, each mode of operation corresponds to a different consumer electronic device and is determined by the orientation of the remote control device. The present application claims in claim 1, all the above limitations and rewords the underlined limitation of patent '801 to read, "*the motion detector communicates a signal to the processor indicating a direction in which the remote control device is moved*". Claim 1 of patent '801 implicitly implies this limitation. Therefore, this limitation has no patentable distinct language or renders claim 1 of this application patentable.

With respect to claim 13, "the processor includes a microprocessor". One of ordinary skill in the art readily recognizes a processor generally refers to a central processing unit (CPU), which performs many function. Therefore, the processor of patent'801 implicitly implies this limitation.

With respect to claim 21, "the housing is constructed from the group consisting of metal and plastic", is not a patentable distinct limitation and obvious to one of ordinary skill in the art.

With respect to claim 26, "an input device in communication with the processor", was not claimed in the parent patent. However, this limitation is obvious because most remote control devices comprise an input means (i.e. buttons, keys or switches).

One to one correspondence of claims recited in present application to claims of application, which matured into a patent.
